LiquidMount™

This stunning new mounting option will blow you and your customers away!

Here's how it works: a piece of 1/4 inch thick Plexiglas is cut to size and the edges are buffed until they gleam. One side of the Plexiglas is coated with an optically clear adhesive. Your print is mounted, face down, on to the adhesive. A piece of 0.040 Styrene is mounted to the back of your mounted print to protect it from dents and dings. The result is a piece that practically leaps off the wall at you. You have to see it to really understand it.

- ▶ Metallic Paper Only (print cost not included above)
- ▶ Includes 0.040 Styrene Backer for protection

- ▶ Finished piece is up to 3/16 inch undersized to accommodate flush trimming
- ▶ Can be drilled and suspended with wire or cables

Image Selection

LiquidMount works well with these types of images:

- ▶ Color or black & white
- ▶ High contrast
- ▶ Saturated colors
- ▶ Images with some sort of metal in them

Final Print Display

In addition to our GatorFloat™ option (below), there are several ways to display LiquidMount™ prints.

We're not very efficient distributors of other products. In an effort to enable you to offer accessories at aggressive, yet profitable prices to your customers, here is a partial list of suppliers for these display options.

- ▶ Tabletop Print Easel (UM sku 5198)
- ▶ Aluminum corner clips (UM sku 3564)
- ▶ Picture Rail (RB sku 343499, 528533, 582638)

UM = United Manufacturers www.unitedmfrs.com

RB = Room and Board www.roomandboard.com

GatorFloat™

The GatorFloat™ enables your customer to hang the finished LiquidMount on the wall with a single picture nail. The GatorFloat™ is a piece of 3/4 inch black Gatorfoam™ undercut by roughly six inches in each direction. It is then bonded to the center of the back of the LiquidMounted™ print. Suitable hanging hardware is then secured to the GatorFloat™.

The result is a gorgeous three-dimensional print that appears to float on the wall.
